Generator Wattage Selection Guide

Using the Generator Wattage Reference Chart, select the items you wish to power at the same time. Write the corresponding RUNNING (Rated) watts and SURGE (Starting) Watts in the designated wattage worksheet columns below.

Add up the RUNNING Watts of the items you wish to power at the same time and enter the total in the Total Running Watts space (A).

RUNNING (Rated) Watts vs. SURGE (Starting) Watts

- ✓ RUNNING (rated) watts produced by a generator represents the amount of continuous power output
- ✓ SURGE (starting) watts produced by a generator represents the amount of temporary bursts of power output required by common tools and appliances for 2-3 seconds during start up

Generator Energy Conversions

When calculating power requirements use the following:

- ✓ Volts x Amps = Watts
- ✓ Amps / Watts = Volts
- ✓ Watts / Volts = Amps

Select the individual tool or appliance with the highest number of SURGE (Starting) watts. Enter number in the Total SURGE Watt space (B). Add the numbers in Spaces (A) & (B). Write Total Watts Required in space (C).

EXAMPLE ONLY

TOOL OR APPLIANCE	RUNNING WATTS	SURGE WATTS
1. Refrigerator	200	1200
2. Television	300	300
3. Lights (7 x 75 watts)	525	525
4. Furnace Fan 1/4HP	600	1000
5. Microwave - 800 watt	1300	1400
6. Radio	200	200
7. Laptop Computer	250	250
